print ki shorket ki kia ha]

"print" ka short form ya shorthand programming me aam tor par `pr` ya `prt` nahi hota; lekin programming languages me `print` function ko short karne ka concept depend karta hai:

- **Python me:** `print()` function ka koi official short form nahi hota, hamesha `print()` likhna padta hai.

- **Custom shortcut:** Agar aap chahen, aap ek short function bana sakte hain:

python   ⧉ Copy code

```python
def p(x):
    print(x)

p("Hello World")
```

Yahan `p()` `print()` ka short form ban gaya.

Agar aap chah rahe hain general abbreviation ya keyboard shortcut, to vo har language ya IDE pe different ho sakta hai.

Agar chahen to me aapko **different programming languages me print ke short forms ya shortcuts** ka ek chhota table bhi bana sakta hoon.

Kya me wo bana doon?

⧉ 🖒 🖓 ⬆ 🔁 ⋯

keyboard se

Agar aap **keyboard se "print" ka shortcut** pooch rahe hain (jaise kisi document ya browser me print karne ke liye), to ye depend karta hai operating system par:

- **Windows / Linux:**
  - Shortcut: **Ctrl + P**

- Isse aap current document ya page print kar sakte hain.
- **Mac:**
  - Shortcut: **Command (⌘) + P**

Ye almost har application me kaam karta hai: Word, Excel, browser, PDF reader, etc.

Agar chahen to me aap **aur keyboard shortcuts** bhi print aur file operations ke liye bata sakta hoon.

Kya me wo list bana doon?
